

## UTILITY BILLING SOLUTION

### Energy and Utility Management

With its intuitive design and scalability, the Intergraph Government Solutions (IGS) Utility Billing Solution (UBS) enables public works and other organizations to quickly implement and integrate an easy-to-use utility billing component to their existing system or as a part of an improved utility billing program.

#### Integrated, Scalable Solution

Federal, state and local government public works and other utility providing organizations work hard to keep their customers connected to the resources required for today's way of life. However, reclaiming the costs of these resources can be complex and expensive. Many of these organizations spend multiple man-years to capture meter readings and generate bills monthly with varying business rules, or they do not have an effective method to educate non-reimbursable customers on the valuable utility commodities being consumed. With existing processes and systems unable to handle the ever-growing demand, utility providers need an easily integrated, scalable, and intuitive solution for collecting meter readings, generating bills and mock bills, and reporting utility usage trends and data.

UBS simplifies this in an affordable component that easily integrates with existing systems and, with its intuitive design,

UBS can be implemented locally within one billing cycle. When integrated with a Utility Monitoring and Control System (UMCS) or networked smart meters, the monthly bill and mock bill generation process can be accomplished in minutes rather than days. UBS can also import meter readings captured in most formats and mobile devices. Customer accounts, rates, commodities, and other business rules are scalable and configurable for any organization. All of this equates to a billing solution that requires minimal overhead resources, accurate billing, and a high return on investment with typical payback within the first year.

**All of this equates to a billing solution that requires minimal overhead resources, accurate billing, and a high return on investment with typical payback within the first year.**

Our UBS implementation experts can migrate historical data so your organization can quickly begin to generate trend data on the UBS dashboard for energy management decision making and energy awareness programs. This maximizes return on investment through better cost-conscious decisions and customer education. UBS has brought success to U.S. Army installations by reducing resources required for the billing process and improving energy awareness among installation soldiers and tenants. Contact IGS today so we can help your organization be successful in efficient utility billing and achieving NetZero goals.

## Key Benefits

1. Integrates seamlessly with existing smart meter or traditional meter systems
2. Scalable to any size organization
3. Configurable to local business rules and algorithms
4. Tablet friendly forms for manual capturing of readings
5. Affordable solution with high average return on investment and quick payback
6. Generates bills for reimbursable utility customers or mock bills for non-reimbursable programs
7. Meter data is auto-imported from a smart meter system, uploaded from files, or manual input into UBS
8. Tools for simple searching, analysis, and reporting of utility data
9. Exportable utility usage trend graphs for easy development of professional presentations and technical reports
10. U.S. Army Networkiness Certified (#201620337)
11. Available on U.S. Army contract vehicle CHESST-T

## Services Offered

Intergraph Government Solutions offers a wide range of services to support our solutions that assist your installation and energy management initiatives. We employ a combination of expert consulting and industry-standard software to help you increase productivity and cut costs while meeting your business objectives and complying with executive reporting requirements and initiatives.

Our solutions and services:

- Help you streamline workflow processes
- Enable fast and accurate reporting
- Facilitate standards compliance
- Open up a host of other improvements – all of which maximize your efficiency and support operational sustainability goals.

Areas for services include production management, environmental management, real property management, geospatial management, energy management, and endangered species management.

IGS has implemented automated processes at a number of U.S. military installations for monitoring and managing workforce production, real property records, energy and environmental conservation programs, and geospatial requirements. All IGS software products contain user-friendly reporting capabilities that are specialized for each subject matter area and are easily adaptable to your installation's needs.
